

Knowing some bugs

Subject:
Living beings
and biodiversity

Suggested
place:
School garden,
orchard or
flowerbed

Duration:
40 to 50
minutes

Goal

Awaken children's curiosity about the small living beings present in the garden, promoting attitudes of care, respect and enchantment towards the biodiversity that inhabits the soil and plants.

Methodology

Start with a circle time discussion:

“Did you know that very small animals live in the garden? Let’s go there to meet these residents?”

Show large, colorful pictures of little animals like ants, worms, butterflies, snails, and ladybugs. Suggestions:

NAME OF INSECTS:

LADYBUG

ANT

SNAIL

EARTHWORM

GRASSHOPPER

THREE-BANDED ARMADILLO

BUTTERFLY

CATERPILLAR

BEE

SPIDER

APHID

Song about insects to sing with children

Take small groups to the garden area with magnifying lens, pots with lids (for temporary observation and return) and a floor magnifying glass, if it is available.

Encourage them to observe the ground, the leaves, the corners.

Make questions during exploration, such as:

“What’s walking over there?”

“What does this butterfly look like?”

“Shall we count how many ants we see?”

Records

After observation, offer materials such as play dough, crayons, paint or even natural elements collected from the garden floor so that children can represent the animals they found.

Use large kraft paper to make a collective mural with stamps or drawings of the “little animals in our garden”.
