

WASTE DISPOSAL

Topic: Waste separation and recycling

Duration: Approximately 40 minutes

Field of Experience: Spaces, Times, Quantities, Relationships and Transformations

BNCC Skills: EI03ET03 – Estabelecer relações de causa e efeito ao explorar situações diversas.

(EI01ET05) Manipular materiais diversos e variados para comparar as diferenças e semelhanças entre eles.

Learning Objectives

- Present, in a fun way, the different types of waste and their corresponding bin colors.
- Stimulate the notion of sorting and organization.
- Promote the development of logical reasoning and motor coordination.
- Initiate environmental awareness and care for collective space.

WASTE DISPOSAL

1. Initial conversation circle time

Introduce children to colored bins (or cardboard boxes with simple selective collection colors: blue, green, red and yellow).

Show different types of clean and safe waste (plastic pots, pieces of paper, cans etc.) and associate each item with the color of the corresponding bin, with the help of images and toys.

Use simple language: "This paper goes in the blue bin!", "The plastic container goes in the red bin!"

2. Separation game

Set up a circuit with the "trash cans" and spread the waste in an area of the room or patio.

Children collect and place them in the correct containers, with the help of the teacher, encouraging the association of colors and materials.

You can use music during the walk or a simple song about recycling!
